Where energy is opportunity™

Brief History

- Coriolis meter brought to market in 1977.
- O&G industry investing in MPFM tech in early 80's
- No meters in use until early 90's
- Development by Schlumberger, Roxar/Emerson, MPM, Framo, Pietro Fiorentini, and others
- Introduction of radioactive measurement methods
- Over 8000 MPFM's in use worldwide today

Multi-Phase Flow Metering Challenge

- Phase slip
- Flow regime
- Fluid properties
- 0-100% GVF
- 0-100% WC
- Non-radioactive
- Non-intrusive

Piston Meter Concept

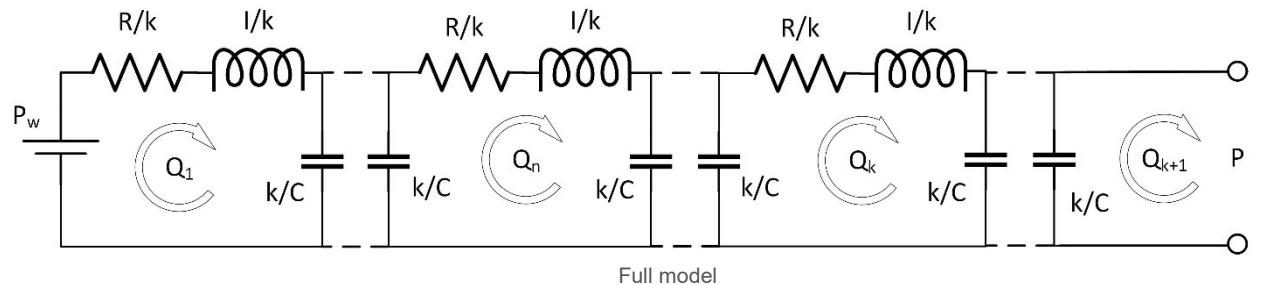

Mathematical Model

- Similar to transmission line model
- Lumped parameters in k loops
- P – Pressure
- Q – Flow rate
- R – Pipeline resistance
- C – Fluid compliance
- I – Fluid inertance

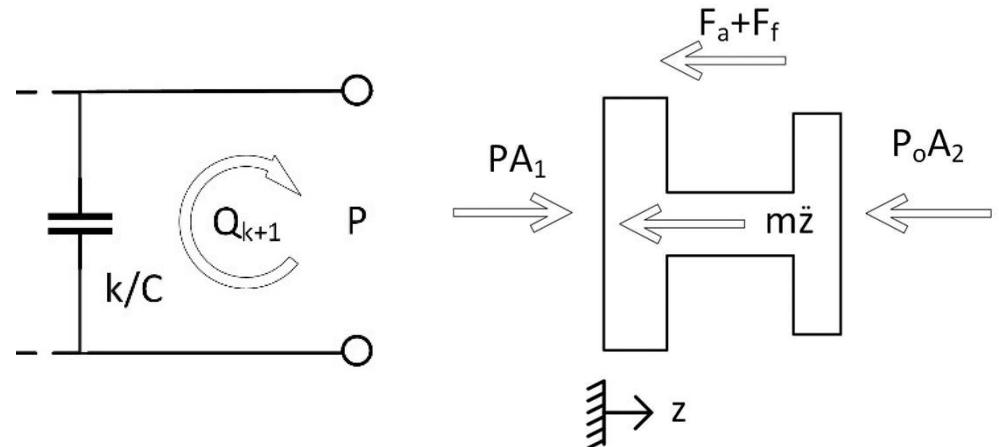

$$\frac{k}{C} \left(\int Q_{n-1} dt - \int Q_n dt \right) - \frac{R}{k} Q_n - \frac{I}{k} \dot{Q}_n - \frac{k}{C} \left(\int Q_n dt - \int Q_{n+1} dt \right) = 0$$

Mathematical Model Cont.

- Simple equation of motion
- Friction forces
- Pressure
- Acceleration
- Applied force from actuator (forcing function)

$$m\ddot{z} = PA_1 - F_a - F_f - P_oA_2$$

Simulink Model

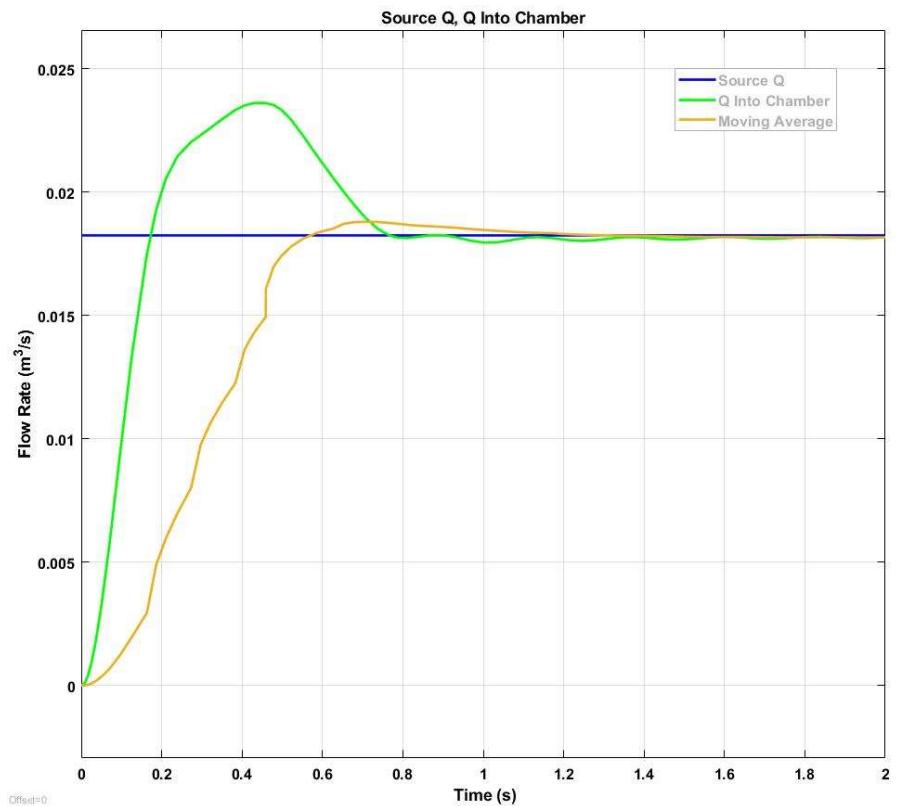

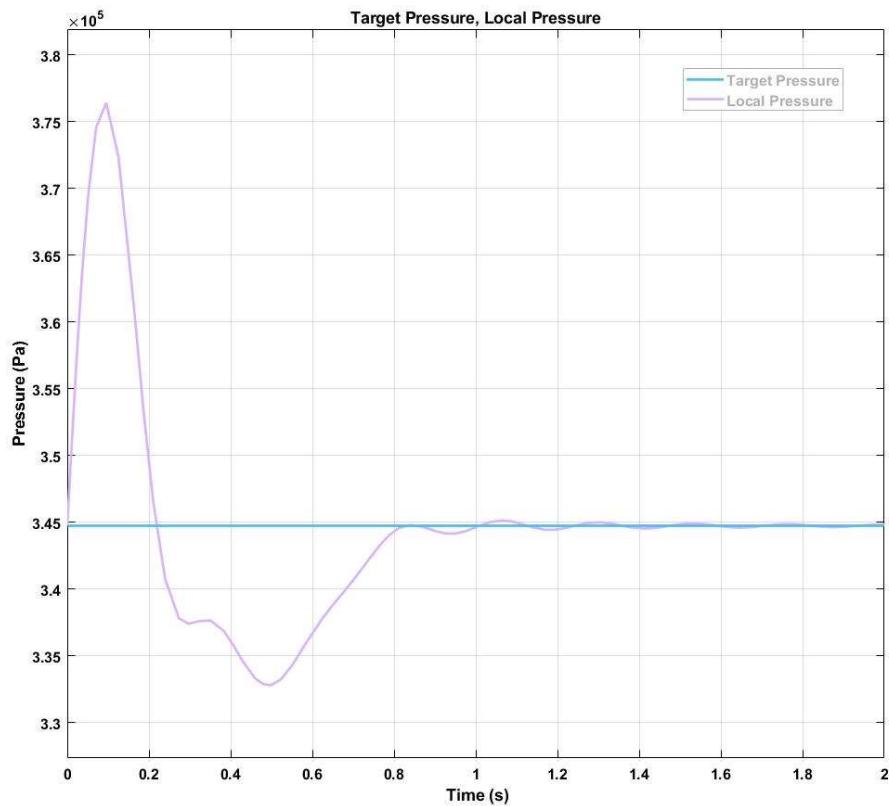

PID Tuning

- PID Control tuning with Simulink Control Design
- Tuned gain values were well fit for real system

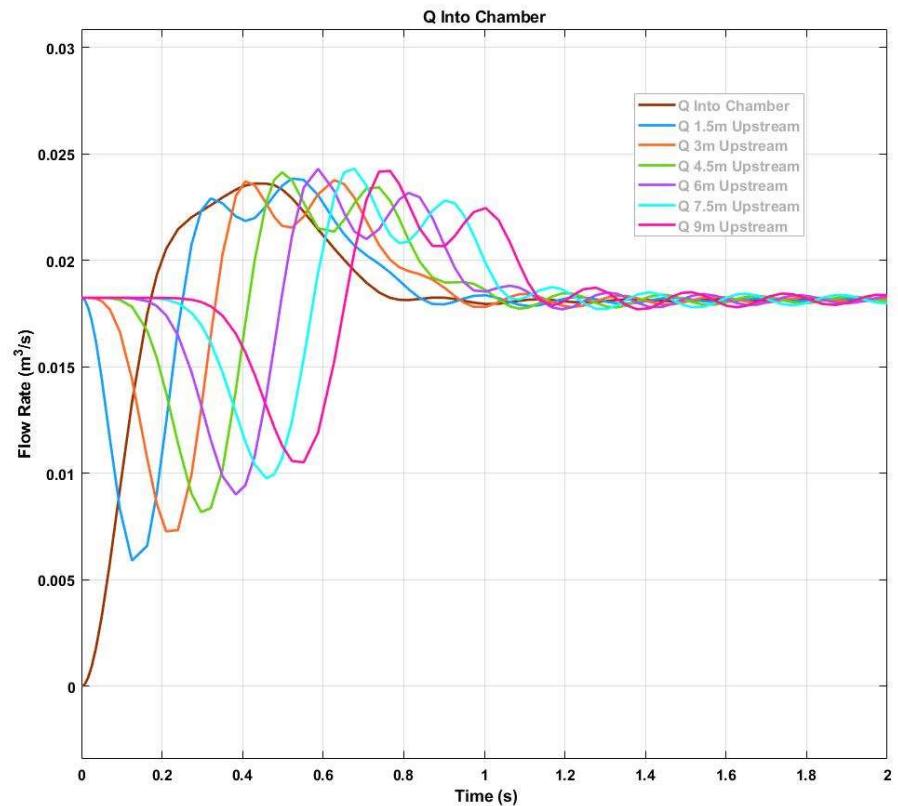

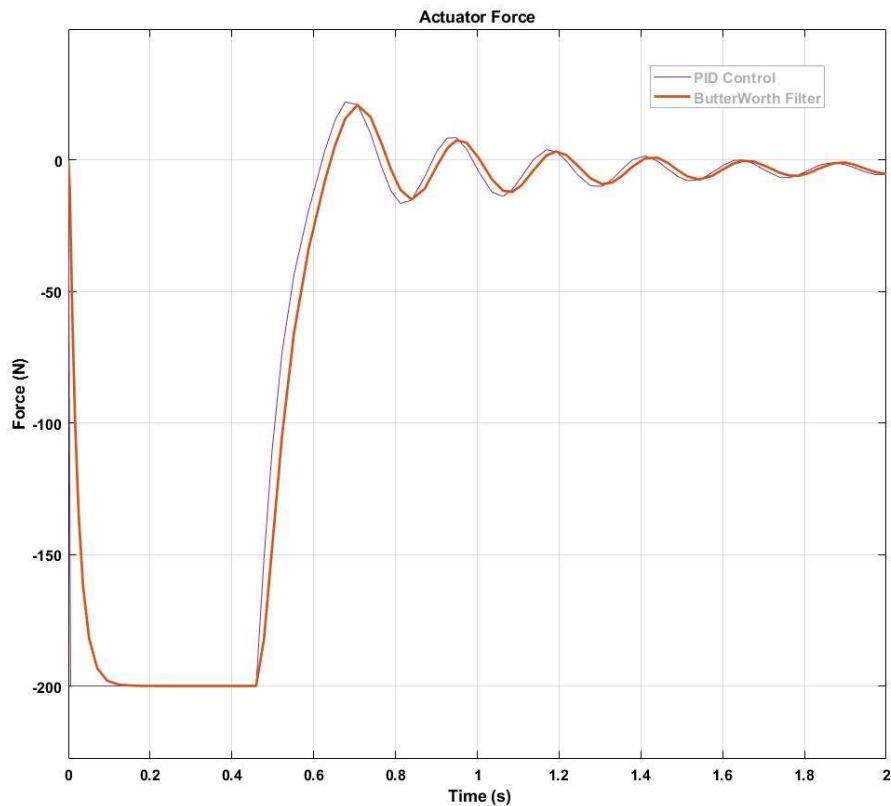

Example Results - Pressure and Flow

Example Results - Forces and Upstream Analysis

Conclusions

- Fluid flow analysis without CFD
- Power of iteration with state space modelling in MATLAB
- Ability to tune PID system with Simulink Control Design
- Simulated results match expectations, validates concept

MathWorks products and toolboxes used:

- MATLAB R2019b
- Simulink V10.0
- Simulink Control Design V5.4
- Signal Processing Toolbox V8.3
- DSP System Toolbox V9.9
- Control System Toolbox V10.7
