

The background features a dark blue field on the left and a grey field on the right, separated by a diagonal line. In the upper right, there are white, stylized waveforms. In the lower right, there is a 3D wireframe mesh with a color gradient from yellow to blue, and a faint blue circuit board pattern.

MathWorks Training Offerings

Verification and Validation of Simulink Models

ADVANCED

This one-day course describes techniques for testing Simulink model behavior against system requirements. Topics include:

- Identifying the role of verification and validation in Model-Based Design
- Creating test cases for Simulink models
- Analyzing simulation results to verify model behavior
- Automating testing activities and managing results
- Formally verifying model behavior
- Automatically generating artifacts to communicate results

Prerequisites: *MATLAB Fundamentals* and *Simulink for System and Algorithm Modeling*. This course is intended for intermediate or advanced Simulink users.

Accelerating the pace of engineering and science
