

MATLAB EXPO 2017

Machine Learning Simplified

Paola Jaramillo

Brain-controlled Robots

**New MATLAB framework makes machine learning
easy and **accessible** for Engineers**

Consider Machine Learning When

Solution is too complex for hand written rules or equations

Speech Recognition

Object Recognition

Engine Health Monitoring

Because algorithms can

learn complex non-linear relationships

Solution needs to adapt with changing data

Weather Forecasting

Energy Load Forecasting

Stock Market Prediction

update as more data becomes available

Solution needs to scale

IoT Analytics

Taxi Availability

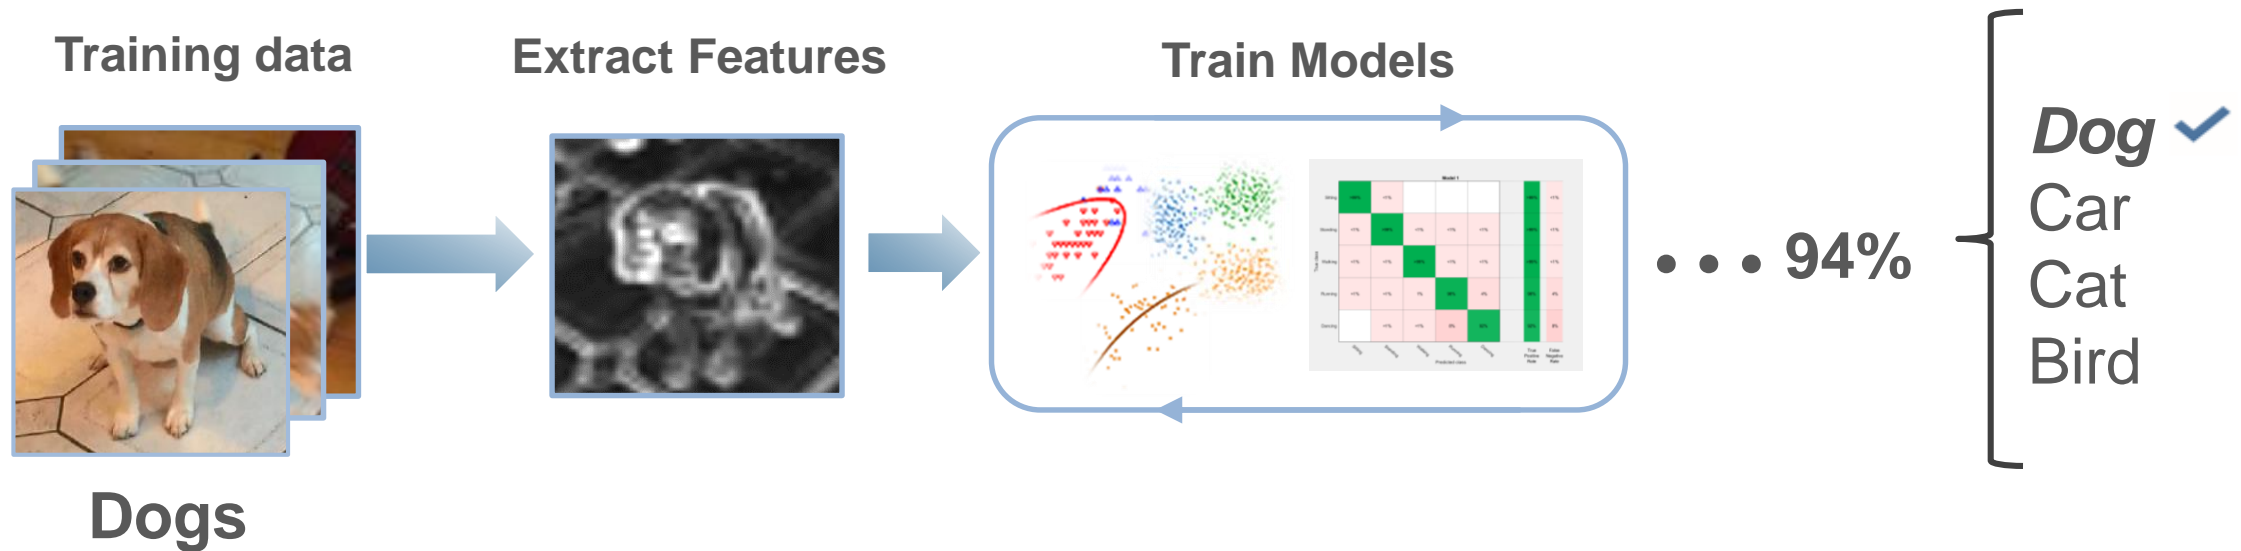

Airline Flight Delays

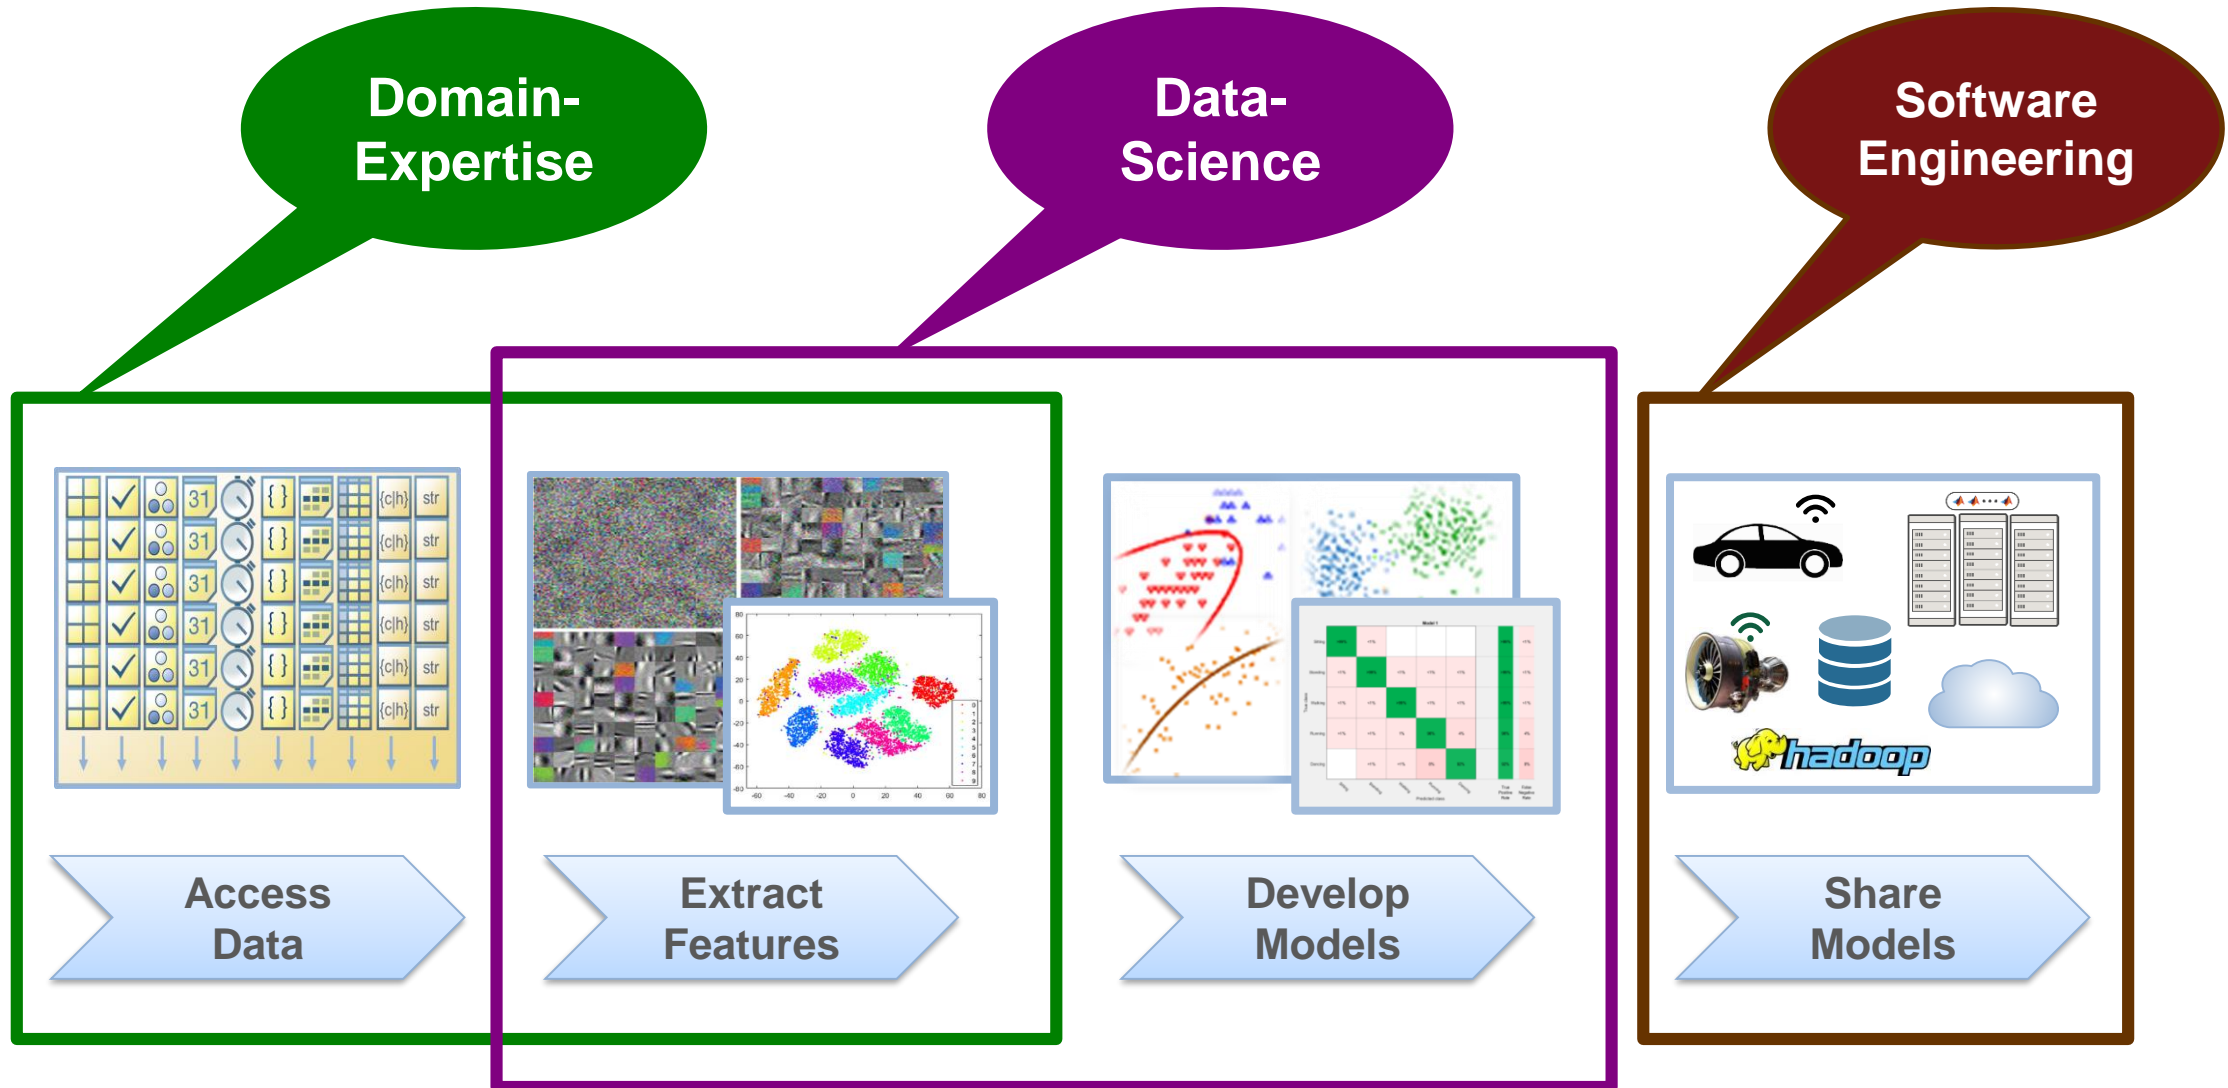

learn efficiently from very large data sets

What is Machine Learning?

Machine learning algorithms use computational methods to “**learn**” information *directly* from data without assuming a predetermined equation as a model

Challenges

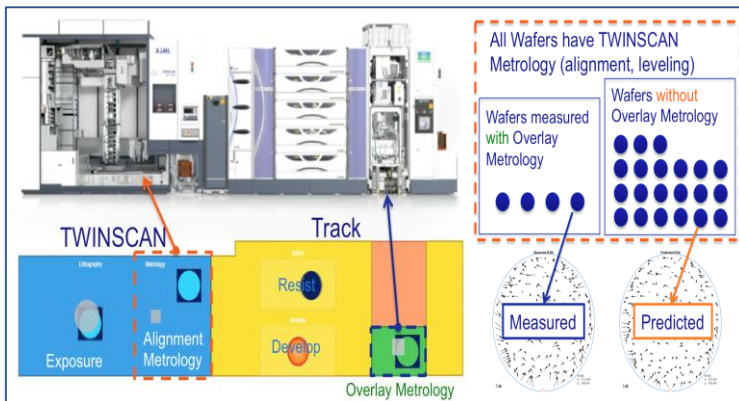

Challenges from our Customers

Goal: Develop a predictive maintenance system to reduce pump equipment **costs and downtime**.

- Convert **unreadable data** into a usable format.
- **Automate** filtering, spectral analysis, and transform steps for multiple trucks and regions.

Goal: Develop a **prototype quickly**, relying on functions that have been deployed across ASML's large, **diverse user** base and **maintained** by dedicated professionals.

- **Lack of experience** with neural networks or machine learning.

**New MATLAB framework makes machine learning
easy and **accessible** for Engineers**

Our Customers Achievements

“**MATLAB** gave us the ability to convert previously **unreadable data into a usable format**; automate filtering, spectral analysis, and transform steps for multiple trucks and regions; and ultimately, **apply machine learning techniques in real time to predict** the ideal time to perform maintenance.”

Gulshan Singh
Baker Hughes

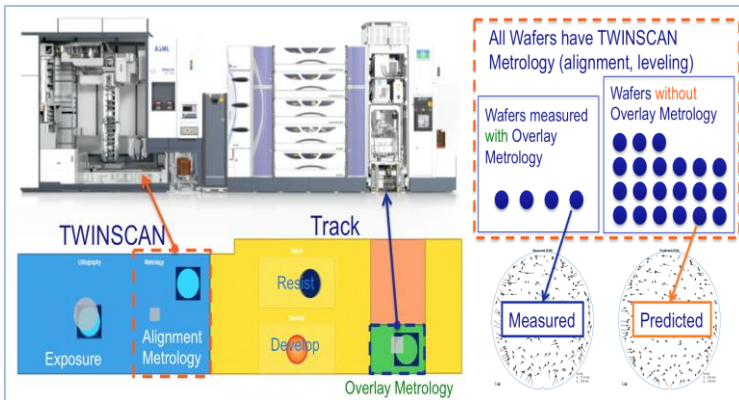

“As a process engineer I had no experience with neural networks or machine learning. I worked through the MATLAB examples to find the best machine learning functions for generating virtual metrology. **I couldn't have done this in C or Python—it would've taken too long to find, validate, and integrate** the right packages.”

Emil Schmitt-Weaver
ASML

Summary of Results

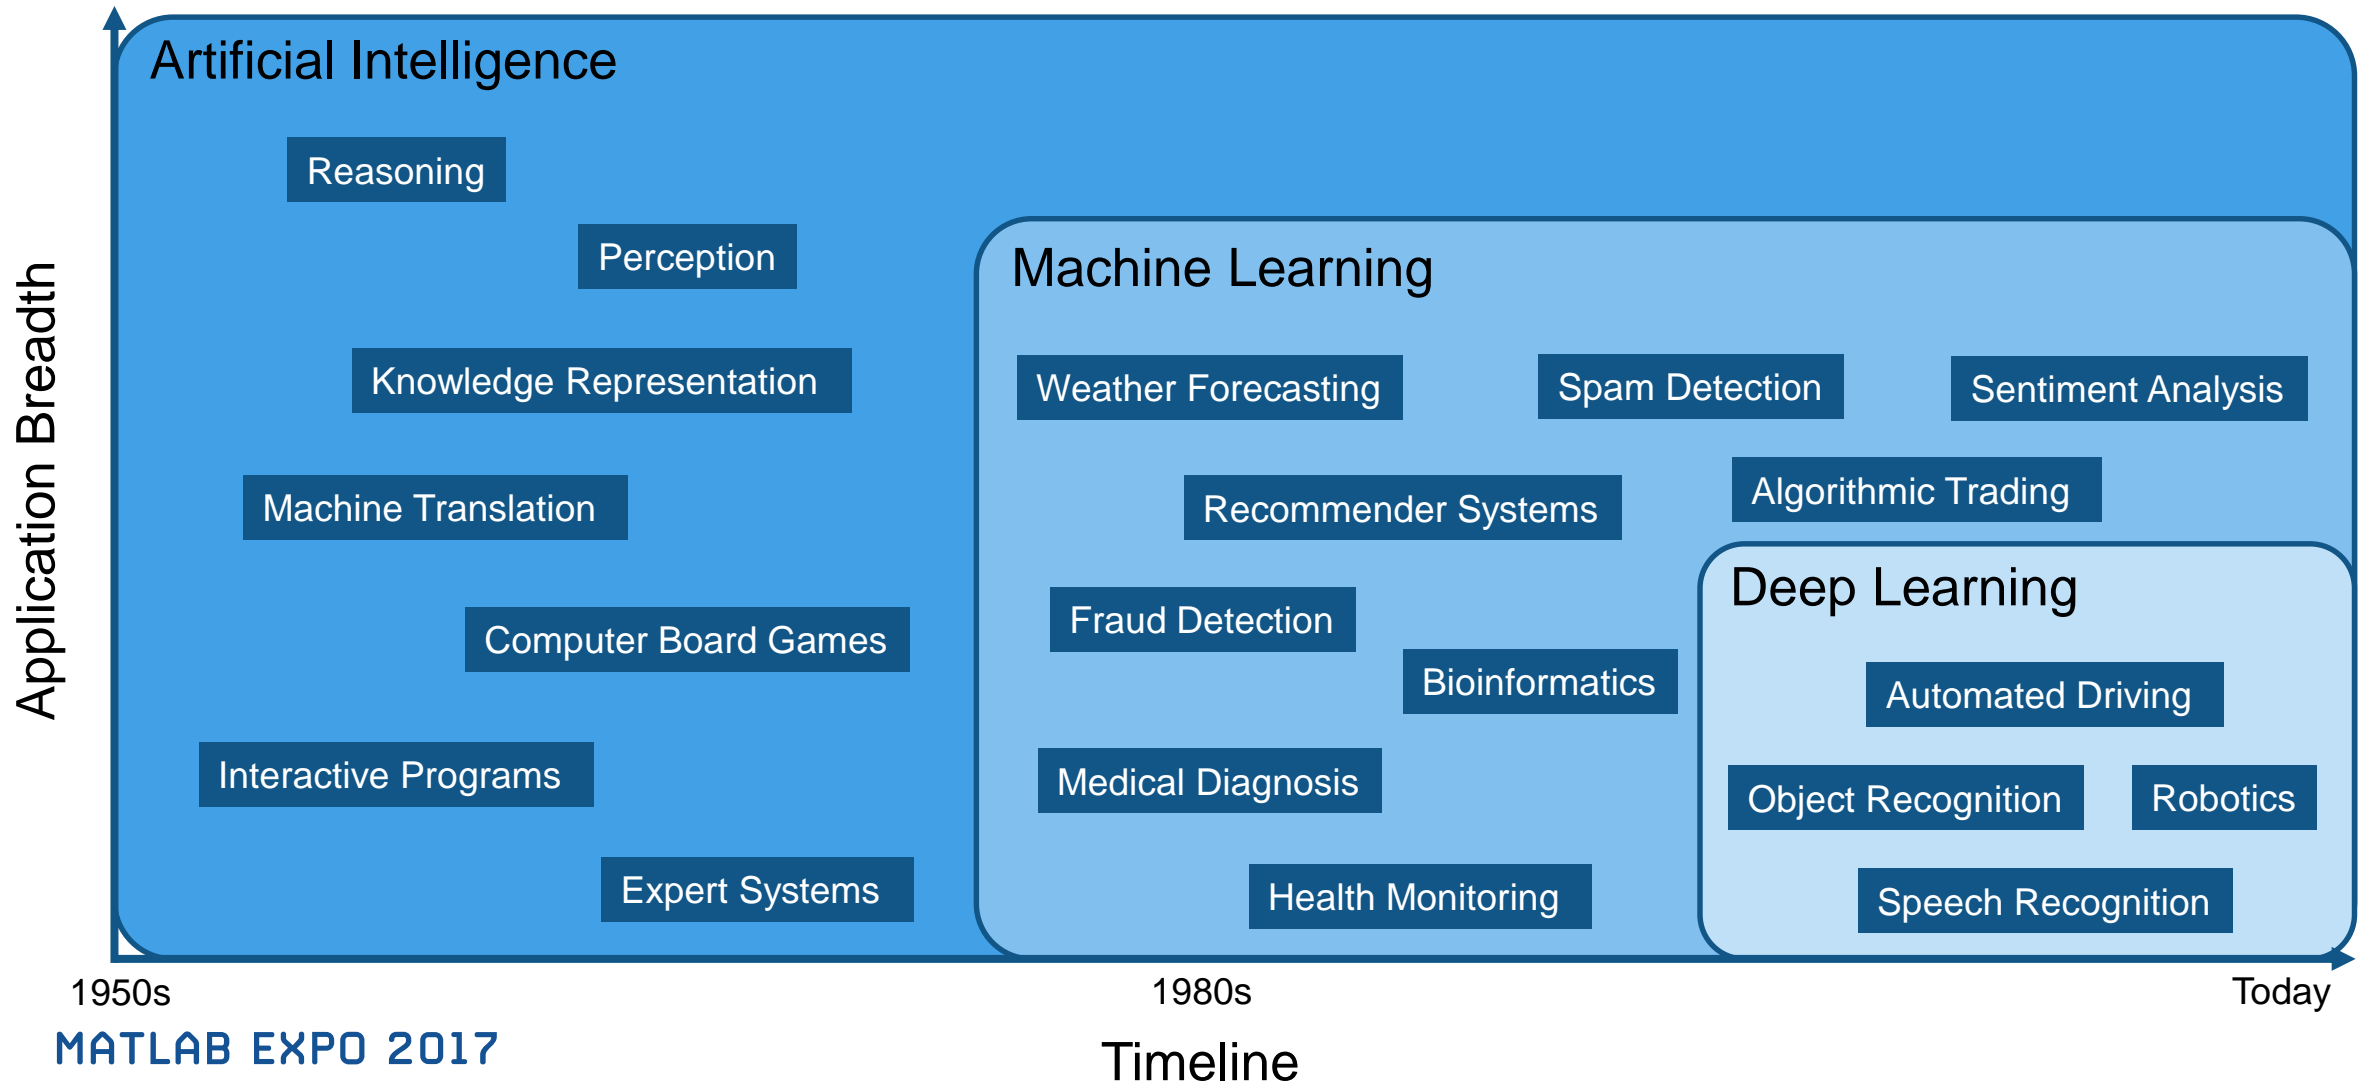

- **Savings** of more than \$10 million projected
- Development **time reduced** tenfold
- Multiple types of data **easily accessed**

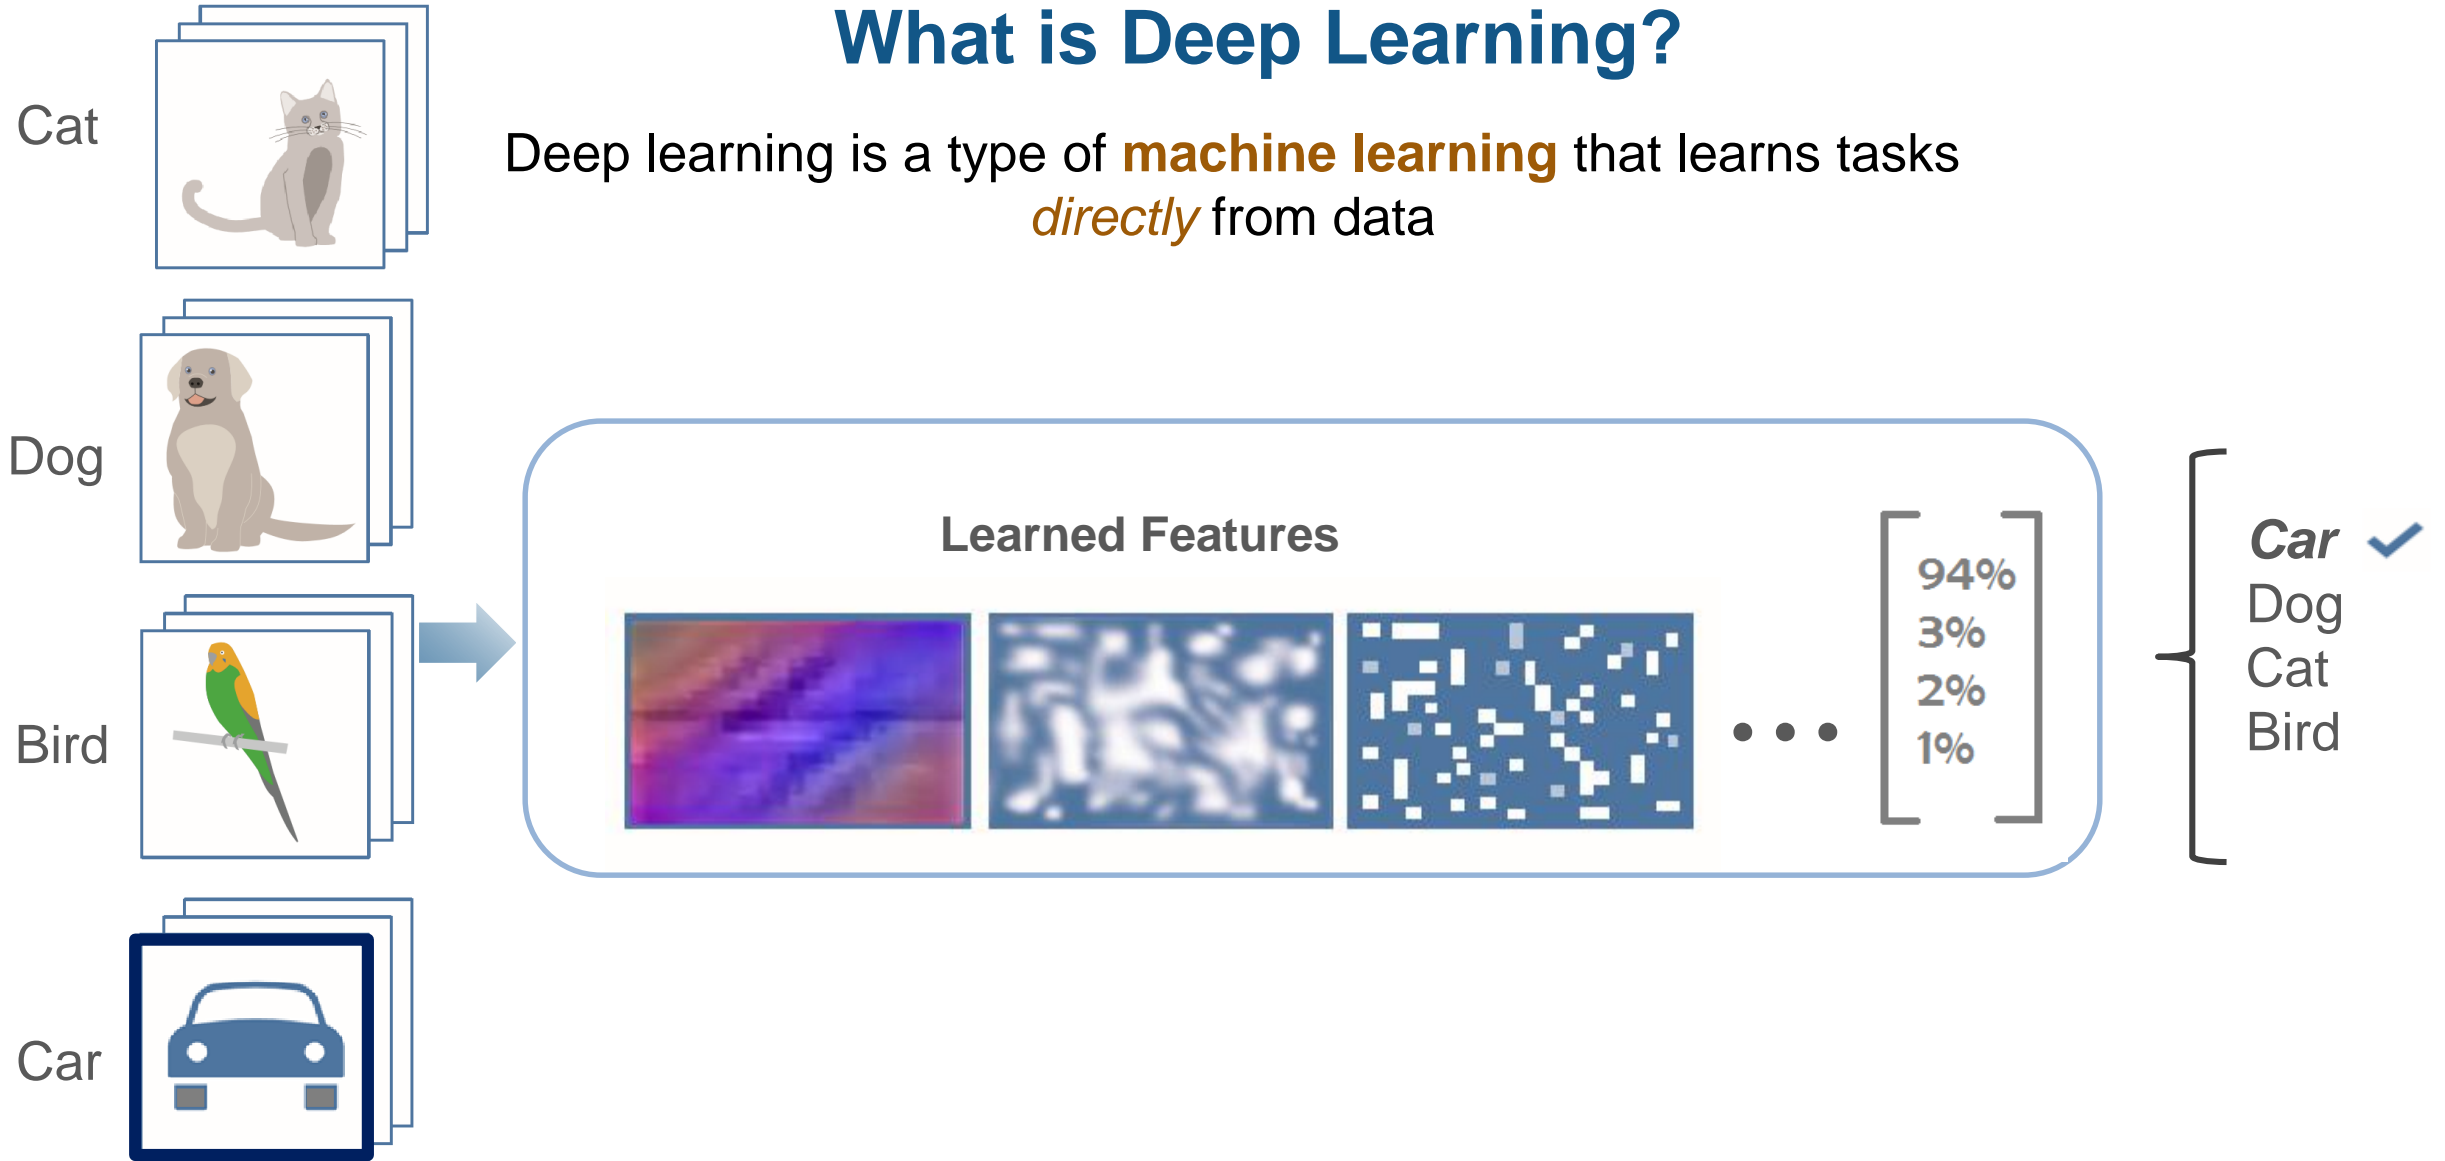

- Industry **leadership** established
- Potential manufacturing **improvements** identified
- Maintenance overhead **minimized**

Artificial Intelligence, Machine Learning and Deep Learning

What is Deep Learning?

Deep learning is a type of **machine learning** that learns tasks *directly* from data

Why is Deep Learning So Popular Now?

Deep Learning Enablers

Acceleration with GPUs

Massive sets of labeled data

Availability of state of the art models from experts

MATLAB makes Deep Learning Easy and Accessible

- Handle large images sets
- Accelerate with GPUs
- Visualize and debug networks
- Access pre-trained models

AlexNet
PRETRAINED MODEL

VGG-16
PRETRAINED MODEL

Caffe
MODELS

Making Deep Learning easy to use is Changing the World

```
clear

camera = webcam; % Connect to the camera
nnet = alexnet; % Load the neural net

while true
    picture = camera.snapshot; % Take a picture
    picture = imresize(picture, [227,227]); % Resize the picture

    label = classify(nnet, picture); % Classify the picture

    image(picture); % Show the picture
    title(char(label)); % Show the label
    drawnow;
end
```

Train a Deep Learning Vehicle Detector

Train a vision-based vehicle detector using deep learning.
